

Class 4 Science Classifying Invertebrates

Activity 1

Use the '**Invertebrates Classification Key**' to find, identify and name invertebrates in the local environment (this could be in your garden or you could do it when you go for a walk with your family).

Record any invertebrates you find on the '**Invertebrate Hunt Activity Sheet**'.

Activity 2

Create an '**invertebrate identification Card**' (you could use the template in the folder or create your own) for one (or more) of the invertebrates you found.

Remember to:

- Draw a picture of the invertebrate and label it.
- Write the invertebrate's name on the card (can you do it in Latin too?)
- Describe its characteristics.

You can use the '**Invertebrates Classification Word Mat**' to magpie key words for your card.
