

I have sent the blank diagram of the human body again this week.

[TASK 3] You can either draw all the main middle parts of the digestive system onto another copy of the blank diagram OR, if you are feeling confident of your drawing skills, you can ADD the digestive organs onto the drawing you did last week which showed the heart, lungs and main veins/arteries. This will be more difficult because the Digestive System fits quite so snugly up against the things you drew last week!

In case you have forgotten what the organs of the Digestive System look like (and which one is which), here are two links to useful videos that a lot of you will have seen before:

The Digestive System – friendly cartoon version

<https://www.youtube.com/watch?v=C5EeTyP3fAo>

Making Poo...! – proper, well-explained Science, just with a strange title

<https://www.youtube.com/watch?v=aemI64NAK08>

And here is an extra clip which explains enzymes very well indeed...

Amazing Enzymes – from the ‘Operation Ouch’ TV series

<https://www.youtube.com/watch?v=EHgt0HEsJbk>

Then there is the video from last week with a short explanation of seven systems within your body.

Systems of the Human Body: 9 minute compilation video

<https://www.youtube.com/watch?v=LReJG7PrXFY>

It is worth going back to this one each week as it reminds you how everything works together.
