

1) Which one is the odd one out? Prove it!

$$\frac{21}{7}$$

$$\frac{12}{4}$$

$$\frac{10}{3}$$

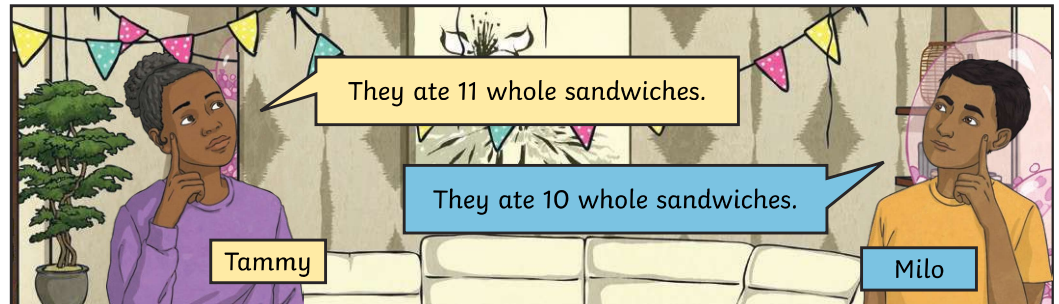

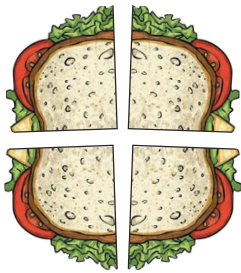

$$\frac{18}{6}$$

---

---

2) The children have solved a problem. Read their answers. Explain who is incorrect and why.

There are 4 children at a party. Each whole sandwich is cut into 4 parts. The children eat 42 parts altogether. How many whole sandwiches did they eat?

---

---

3) Read the statement. Do you agree or disagree? Explain your reasoning.

If the numerator is double the denominator, it means you have 3 whole ones.
