

Climate Change

Rising Sea Levels

Task one

Read through the information about rising sea levels in the folder.

Task two

Look at the information about 'Countries threatened by melting ice'. You are going to do some more research about some of these countries today.

- Tuvalu Islands
- The Maldives
- The Seychelles
- The Solomon Islands

For each of these groups of Islands, you are going to find out:

- The number of islands (E.g. The Seychelles is made up of 115 islands).
- The location (which continent and which ocean)
- Population
- Why these islands are at risk of disappearing (what in particular is affecting them)

You are then going to locate these islands on a world map (I have included a world map in the folder for you to annotate) and write a fact file for each of these groups of Islands using your research. You may decide to write this information around the world map or create a 'Top Trumps' style card with the information and map on for each group of islands.

You can be as creative as you like when presenting this information.

Some examples are below:
